

Down To Earth Solutions

## SEDCAGE™

### ABOVE-THE-GRATE INLET PROTECTION

The release of sediment laden runoff and dust can have a range of adverse effects on the natural environment and the economy and is one of the primary risks associated with construction site activity. Adopting and maintaining effective control measures are essential in mitigating sediment discharge from construction sites and protecting our waterways and our natural features.

SedCage™ is designed to handle all that Mother Nature can dish out and built with durability in mind. The SedCage™ is made with a heavy-duty, high-flow monofilament geotextile that resists tearing and has a large unrestricted overflow, which in nearly all cases, exceeds the flow capacity of the grate.

SedCage™ provides an over-the-grate inlet protection that comes fully assembled, is re-usable and requires no extra labor for installation making it an economical sediment control solution.

**1** Effective

**2** Simple to install

**3** Easy to maintain

#### Features & Benefits:

- Fully assembled
- No trenching or back-filling
- Re-usable
- Heavy monofilament fabric resists tearing
- Stands up to jobsite abuse
- Compatible with square, rectangular, round, or beehive grates
